

# Survey Statistics: Course Evaluation

---

 e-learn.sdu.dk/webapps/assessment/stats/stats.jsp

The statistics are calculated based only on the attempts being used in the grading option (Last attempt, First attempt, Lowest Score, Highest Score or Average of Scores). If Average of Scores is the grading option, then all attempts are included in the statistics.

I should probably have spent more time trying to implement some microservices (but it's okay that this wasn't required by the course as I ended up being swamped due to other courses as usual).

---

The course provided a great introduction to microservices. The lectures were not only informative, but also interesting as the content of theoretic concepts and practical applications was perfectly balanced. The only thing to criticize is probably that there should be a more strict selection of material for the student presentations, as some presented information seemed scientifically questionable.

---

Great course. Unusual structure, but it helps me learn at my own pace. I am pulled to learn more, rather than pushed to finish the weekly reading, etc.

---

I find the structure of the final project quite confusing, with not a lot of details of what is expected or when it's supposed to be done. This seems to work really well for some, but i personally prefer more closed (Do this before that date) projects

---

While I strongly agree with "I find the activity of presenting research papers useful/pedagogical" 3/4 of my courses required a presentation, which was too much.

---

I find it hard to identify on what technical level the project should be on when doing a software project.
